Connect wallet

Launch a real app. Prove its revenue. Raise on-chain.

Every token here is backed by a real software project. Revenue and traffic are proven with zkTLS and recorded on zkVerify — verification is not a badge, it gates the sale parameters, the deposit, and payouts.

Milestone payouts

Non-custodial vault - 30% / 30% / 40% - net of a 3% issuance fee and a 5% deposit

Locked until graduation

Batch 1 - 30% Trigger
\$55,200
TGE + first L3 pass - \$54,924 after 0.5% fee

Batch 2 - 30% Locked
\$55,200
Month 6 + two consecutive L3 passes

Batch 3 - 40% Locked
\$73,600
Month 12 + four quarterly passes

Quarterly reports

L3 - each report re-verifies revenue and keeps the badge alive

\$99 / quarter

No reports yet

The first quarterly report window opens after graduation. A missed report pauses payouts and downgrades the badge.

Report template

Token & mechanics

Fixed supply - no team allocation - no vesting

ITEM	VALUE	NOTE
Supply	1,000,000,000 HELI	Fixed - no mint / pause / blacklist
Sale	10% - 100,000,000	Sold in the CCA - no team or ecosystem reserve
Pool reserve	90%	Project tokens inject the V4 pool at graduation - VFY side funded by the foundation - net raise goes to the milestone vault - LP burned and locked
Trading		

Connect wallet to bid

One signature - no gas until settlement - you can lower or cancel your bid before the batch closes. Bidding stays disabled until a wallet is connected.

Recheck this proof locally optional · advanced

The record is already public and complete. Rechecking is a second-level tool for verifiers, not required for buyers.

Drop credential file here (.json / .zip)

Checks run locally in your browser — the original data never leaves your device. The public record above stands on its own.

Choose file

Who verifies, and what is open

Designated verifiers issue proofs · anyone can recheck them

Open scope

What this record covers

L1 ownership (GitHub OAuth) · L2 revenue (Stripe, App Store) · L3 quarterly re-verification every quarter while the token is listed.

Who can verify

Proofs are issued by designated verification partners. The result, the checks and the on-chain hash are public, so any third party can recheck or cite them. Verifier reward program is pending approval — no reward amount is promised on this page.

Launchpad

BETA

[Terms](#) [Risk](#) [Refund conditions](#) [Back to project](#) [Design system](#)

This verification record attests that the named data sources passed the listed zkTLS checks at the stated time and coverage window. It is not a guarantee of future revenue, profit, or token performance. A failed or missed quarterly re-verification pauses payouts and downgrades the badge.

Verified ARR

Coverage

FDV cap unlocked

\$284,000

12 months · 2025-10 → 2026-09 · 0 missing

10 × ARR = \$2.84M

If you skip verification — the cost is explicit

Skipping keeps the draft alive, not the sale: gray "unverified" badge · curve only · lower ranking on the homepage · per-wallet cap applies · no auction and no FDV-cap path. In practice this means you cannot launch in phase 1 (curve is Beta, not open for purchase). You can save the draft and come back after verification; the step is skippable, the cost is not hidden.

Figures shown here are the canonical demo values from the product baseline: graduation floor \$200,000, deposit 5%, issuance fee 3%, milestone payout 30/30/40, quarterly verification \$99. Products in Beta are labeled and not open for purchase. A skipped verification step has visible consequences, listed above: in practice it means you cannot launch in phase 1 (curve is Beta, not open for purchase).

□径: 产品基线 v2.1 · 2026-10-19 · every number on this screen is rendered from the single source of truth

Launchpad Design System

v1.0 · 2026-10-19 · single source: tokens.css · 口径: 产品基线 v2.1

Dark data language + gold trust. Green is data only (up / buy / primary CTA base). Verification, graduation and milestones are gold. Gradients belong to data and brand elements — never to plain containers. One glowing CTA per screen: the nav Launch button.

1 · Color

Surface, text, border

--bg
#0E0E10

--surface-1
#151517

--surface-2
#1C1C1F

--surface-3
#232327

--text-1
#F2F2F0

--text-2
#B9B7B0

--text-3
#8A8880

--border-strong
rgba(255, 255, 255, .12)

--text-2 and --text-3 both clear 4.5:1 on --bg (measured 7.4:1 / 5.4:1). Never use --text-3 for 11px labels below 5.4:1 context without checking.

2 · Semantic gradients gradients only on data & brand elements

--grad · mint
#5AF3E3 → #7FFFAD → #9CFE68

Primary action / gains. Button fills, up data, buy-side bars.

--grad-pink
#FF4D7E → #FF6B9E → #FF9DE2

Sell side / losses / refunding. Sell controls, down-side bars, refund process states.

--grad-gold
#E8A33D → #FFC84D → #FFE08A

Trust, verification, graduation, milestones. Verified badges, Trust Chain passed nodes, milestone chips.

--grad-violet
#E879F9 → #A855F7 → #7C3AED

Auctions & bidding. Auction status, batch progress, auction milestone badges.

--grad-cyan
#2203EE → #60A5FA

Information & verification process. Proof-in-progress, links, informational callouts.

Hard rule: mint never means "verified" and never means "success". Trust = gold. Up = mint. Both may appear on one screen, in different roles.

--sp-8 • 48

--r-sm • 8

--r-md • 10

--r-lg • 12

--r-xl • 16

--r-full

5 • Elevation & motion

Elevation comes from surface steps, not shadows

Rest: no shadow. Card hover: `--shadow-card-hover`. Modal: `--shadow-modal`. The single strong glow is `--glow-cta` on the nav Launch button; large panel CTAs use a soft `--backlight-cta` only. No glow on cards, badges or row buttons.

Motion: 3 durations + 1 curve

150ms micro feedback · 200ms buttons/pills/borders · 300ms panels and tab content · 480ms badge rim close (documented exception). One curve: cubic-bezier(2,8,2,1). The 2800ms heartbeat belongs to the verified badge only, prefers-reduced-motion turns everything off.

6 • Buttons 4 types × 3 states

VARIANT	SIZE	DEFAULT	HOVER	DISABLED
Nav Launch only glow · nav only	md · 36px			
Panel CTA soft backlight · 1 per screen	md · 36px			
Row action no glow · matte solid	sm · 28px			
Quiet / ghost no glow	sm · 28px			

State legend: default / hover / disabled. Only the nav Launch may carry `--glow-cta` (this board shows it once, in the table). Panel CTA = dark center + neutral rim + soft green backlight. Row actions are matte solid with no glow. Disabled = 42% opacity, no shadow, cursor not-allowed. Buttons are pill shaped at md (36px / 13px) and sm (28px / 12px).

7 • Badges & status

Verification badges

A badge is an entry point, not a conclusion: clicking it opens the Trust Chain. Verified badges breathe (2800ms); unverified and traffic badges have zero motion — the contrast itself is the trust signal.

Achievement hexagons hue = meaning; rarity = rim layers, never new hues

Status words · 7, each one word + one color

• Live auction • Live on curve • Revenue verified • Graduated • Refunding • Verifying • Unverified

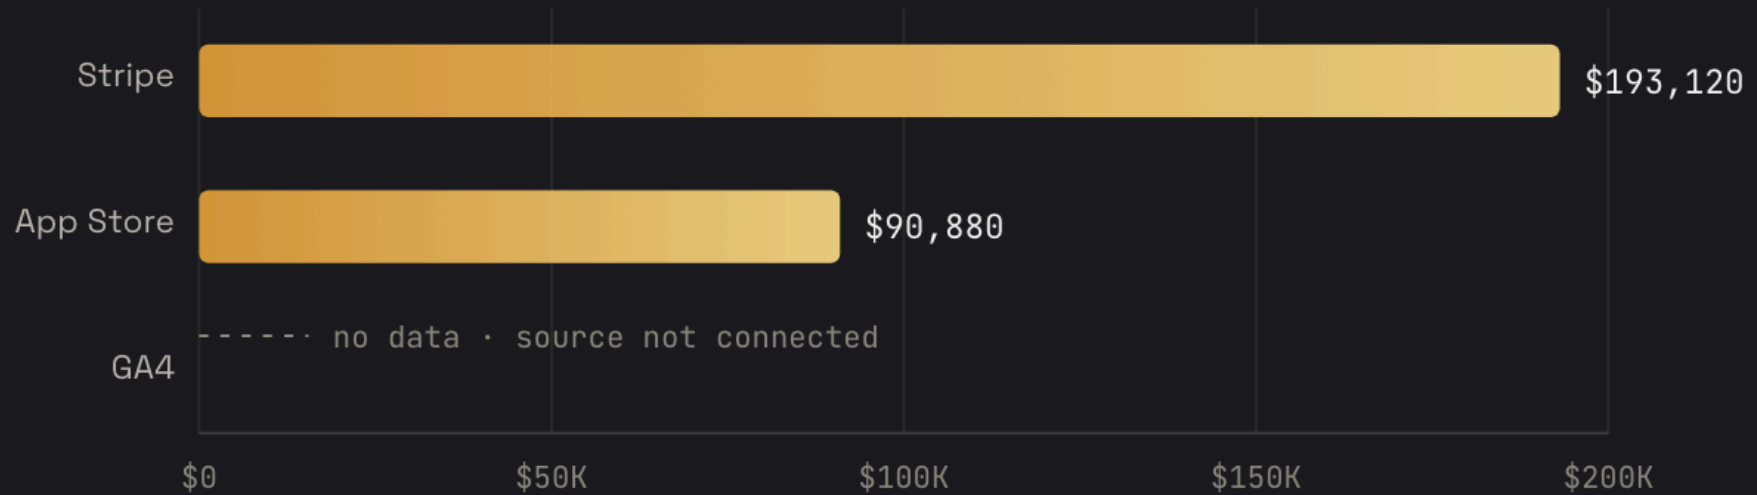

Canonical vocabulary (baseline v2 §4): 拍卖中 → 已上线/曲线中 → 已毕业/失败退款; 验证中/已验证/未验证; 退款中。Status never relies on color alone — icon + word + color.

8 • Chart

axis • unit • time range • null • source — all five or no chart

Verified revenue by source

12 months • 2025-10 → 2026-09

Unit: USD • 12-month verified revenue

Source: zkTLS attestations • Stripe, App Store • Coverage 2025-10 → 2026-09 • Missing months 0 • Updated 2026-10-19 10:12

CSV >

Null is never zero: a missing source is drawn as a dashed baseline with "no data", not as a \$0 bar. Charts always carry axis ticks, a unit, a coverage window, a source line and an updated timestamp.

9 • What this system forbids

Never

emoji as icons • bare hex in components • competitor screenshots • green meaning "verified" or "success" • more than one glowing CTA per screen • charts without axes • "demo data" mixed into "live" • looping glow on containers.

Always

token variables only • tabular-nums on every number • null shown as "—" • source + coverage + updated time next to verified data • status = word + icon + color • keyboard-focusable controls • prefers-reduced-motion respected.

Design system v1.0 — the only source of visual values for the high-fidelity screens in this folder. Components reference tokens.css variables only; the hex values on this page are documentation labels, not styling inputs.
